BACKEND DEVELOPMENT (25CS1302E)**

Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No- 13	Team No - 17	Project Title- Inventory and Warehouse Management System
------------	--------------	---

Abstract:

The **Inventory and Warehouse Management System** is a database-based application designed to efficiently manage products, warehouses, suppliers, and inventory transactions. The system provides a structured approach to storing, retrieving, updating, and monitoring inventory information.

The system maintains details of products, suppliers, warehouses, stock quantities, and inventory transactions in an organized manner. It allows users to add new products, update stock levels, manage warehouse information, record stock movements, and retrieve required information through queries. Relationships between different records help maintain data consistency and reduce duplication.

The system also supports operations such as searching and filtering inventory, generating warehouse-wise stock details, tracking transactions, and monitoring product availability. Proper constraints and relationships are used to ensure accuracy and integrity of the stored information.

The main objective of this project is to provide an efficient and reliable solution for managing inventory and warehouse operations. By organizing all relevant information in a centralized system, the project simplifies stock monitoring, improves data accessibility, and helps users make better decisions regarding inventory management.

1)Team Details:

Roll Number(s)	Name of the Student	Signature
2520080013	D SRI VARSHINI	
2520080018	S. VENNELA	
2520090003	S.UDAYA SRI	

Frameworks / Platforms / Software Used

- **MySQL** – For creating and managing the database.
- **SQL** – For creating tables, inserting, updating, deleting, and retrieving data.
- **MySQL Workbench** – For database design, SQL queries, and database management.
- **Visual Studio Code** – For writing and managing project files.
- **HTML & CSS** – For designing the user interface.
- **JavaScript** – For adding basic interactivity and connecting the interface with the system.

Guide Name and Signature (remarks if any) _____
